ABSTRACT

Average salary increases for 2,918 faculty in the field of communications are reported for 1983-1984 and 1986-1987, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 120,580 faculty at 167 public colleges and 235 private colleges, representing 44 academic disciplines. In 1983, 105 public colleges and 115 private colleges reported on communications faculty salaries, while 116 public and 118 private colleges reported in 1986. Between 1983 and 1986, average salaries of faculty in this field increased 20.7% at public colleges and 19.7% at private colleges. For 1986-1987 the average salary for communications faculty was about 9% below the average faculty salary in the other 43 fields for both public and private colleges. Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total salaries of all institutions in both years; comparisons with the Consumer Price Index of changes in cost-of-living for both years; and comparisons with 43 other disciplines. The disciplines and participating institutions are listed. (SW)

ED287369

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1986-87. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 44 selected academic disciplines including communications. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of communications in the CIP is as follows:

A summary of groups of instructional programs that describe the creation, transmission, and evaluation of messages.

HE 020 785

This article presents a summary of the overall average salary increases in the discipline/major field of communications from the "baseline year" of 1983-84 to and including the "trend year" of 1986-87 for both public and private institutions. Of the 215 institutions which participated in CUPA's

PUBLIC (AASCU) study of 1983-84, 167 also participated in 1986-87. Data from those same 167 institutions were used in both the baseline year and the trend year. Of the 355 institutions which participated in CUPA'S PRIVATE study of 1983-84, 235 also participated in 1986-87. Data from those same 235 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of communications faculty for both public and private participating institutions by rank, including "new assistant professors," the FAC MIX PCT (faculty mix percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1983-84 and 1986-87).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .31 for associate professor of communications in the 1983-84 public study means that 31 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1983-84, PUBLIC 1986-87, PRIVATE 1983-84 and PRIVATE 1986-87. For example, a SALARY FACTOR of 0.97 for assistant professors in the discipline/major field of communications in the 1983-84 public study means that their salaries are 3 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1983-84 or 1986-87). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 44 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of communications with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1983-84 and the "trend year" of 1986-87 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1983-84 AND 1986-87

In the PUBLIC 1983-84 salary study in the above table, the reader may note that the discipline/major field of communications was reported in 105 of the 167 public (AASCU) institutions. The average salary of the 838 faculty was \$24,711. This average salary was approximately 8 percent (0.92) lower than the average salary of \$26,895 for all 36,612 faculty in ALL MAJOR FIELDS in the 1983-84 public study.

In the PUBLIC 1986-87 salary study in the above table, the discipline/major field of communications was reported in 116 of the same 167 public (AASCU) institutions. The average salary of the 962 faculty was \$29,831. This average salary was approximately 9 percent (0.91) lower than the average salary of \$32,670 for all 38,815 faculty in ALL MAJOR FIELDS in the 1986-87 public study.

The increase in average salaries for all faculty in communications after three years in the public institutions studied was 20.7 percent (\$29,831 minus \$24,711 equals \$5,120). The CPI of increased cost-of-living between October 1983 and October 1986 was 9.2 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 11.5 percent or an average of 3.8 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 21.5 percent (\$32,670 minus \$26,895 equals \$5,775). In comparison to the discipline/major field of communications (20.7%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 0.8 percent (21.5% minus 20.7% equals 0.8%) more than faculty in the discipline/major field of communications.

The reader may note that the faculty mix percentage in communications is lower at the professor rank than at the assistant professor rank in both the public studies: 0.19 vs 0.34 (1983-84) and 0.23 vs 0.33 (1986-87),

respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies are as follows: 0.31 vs. 0.28 (1983-84) and 0.34 vs. 0.28 (1986-87), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to communications in both of the public studies.

Finally, the hiring rate of new assistant professors in communications is high in the public studies: 3.9 percent (33/838) in 1983-84 vs. 3.5 percent (1,290/36,612) in ALL MAJOR FIELDS in 1983-84. Also, the hiring rate of new assistant professors in communications in 1986-87 was 5.5 percent (53/962) vs. 3.8 percent (1,487/38,815) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of communications is more than for ALL MAJOR FIELDS in both the public studies of 1983-84 and 1986-87.

RESULTS OF THE TWO PRIVATE STUDIES, 1983-84 AND 1986-87

In the PRIVATE 1983-84 salary study in the above table, the reader may note that the discipline/major field of communications was reported in 115 of the 235 private institutions. The average salary of the 526 faculty was \$24,025. This average salary was approximately 10 percent (0.90) lower than the average salary of \$26,553 for all 21,861 faculty in ALL MAJOR FIELDS in the 1983-84 private study.

In the PRIVATE 1986-87 salary study in the above table, the discipline/major field of communications was reported in 118 of the same 235 private institutions. The average salary of the 592 faculty was \$28,748. This average salary was approximately 9 percent (0.91) lower than the average salary of \$31,548 for all 23,292 faculty in ALL MAJOR FIELDS in the 1986-87 private study.

The increase in average salaries for all faculty in communications after

three years in the private institutions studied was 19.7 percent (\$28,748 minus \$24,025 equals \$4,723). The CPI of increased cost-of-living between October 1983 and October 1986 was 9.2 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 10.5 percent or 3.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.8 percent (\$31,548 minus \$26,553 equals \$4,995). In comparison to the discipline/major field of communications (19.7%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 0.9 percent (19.7% minus 18.8% equals 0.9%) less than faculty in the discipline/major field of communications.

In the discipline/major field of communications, the reader may note that the faculty mix percentage at the professor rank is much less than at the assistant professor rank in the private studies: 0.19 vs. 0.37 (1983-84), respectively; and 0.20 vs. 0.40 (1986-87), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.30 vs. 0.32 (1983-84) respectively; and 0.31 vs. 0.31 (1986-87) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to communications in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in communications in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1983-84, 4.6 percent (24/526) vs. 3.9 percent (856/21,861), respectively; and in 1986-87, 8.6 percent (51/592) vs. 5.0 percent (1,173/23,292), respectively. In other words the hiring rate in the discipline/major field of communications exceeds ALL MAJOR FIELDS in both the private studies of 1983-84 and 1986-87.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of communications and compared that information with 43 other academic disciplines/major fields over a period of three years: the "baseline year" of 1983-84 through the "trend year" of 1986-87. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 2,918 faculty in the discipline/major field of communications participated and were included in the overall total of 120,580 faculty in all 44 disciplines/ major fields in all four studies. The same 167 public (AASCU) institutions and the same 235 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of communications is currently (1986-87) some 9 percent below the overall average faculty salary of the other 43 disciplines/ major fields for both the public and private studies. The average faculty salary for communications in the private institutions was 2 percent less in comparison to that in the public institutions in 1983-84. The overall salary factor in the private institutions is now (1986-87) the same in comparison to that for the public institutions: 0.91.

Second, the CPI of October 1986, in comparison to the CPI of October 1983, indicates that the faculty in communications, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Communications faculty salaries in the public institutions exceeded that of ALL MAJOR FIELDS during this same period by 0.8 percent, whereas communications faculty salaries in the private institutions lagged

behind ALL MAJOR FIELDS by 0.9 percent. Communications faculty in both the public and private institutions have some catching up to do in salary in comparison to their colleagues in ALL MAJOR FIELDS.

Third, in the discipline/major field of communications the assistant professor rank has a greater percentage compared to full and associate professor ranks for both the public and private studies. The full professor rank appears to be increasing more rapidly in the public institutions, in comparison to the private institutions. It seems a smaller percentage of new assistant professors are being hired in the public institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in communications, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Patton Reighard is professor of communication arts at Appalachian State University, Boone, North Carolina.
